AZALEA U. S. D. A.
HYBRID NO. 117.

A SMALL SECTION OF OUR AZALEA BEDS

We have first class stocks in all standard varieties to offer this season. All Kurume varieties are lifted in September and stored in closed frames through the winter. Bright clean foliage with plenty of buds make these

FIRST CLASS FALL OR SPRING SELLERS

August 15, 1953

Dear Fellow Grower:

The continued rain of this past spring, while it made shipping and planting difficult, certainly favored the stock which was in the land. As a result we have some exceptionally fine blocks of plants in all types and varieties available for this coming season.

HARDY JAPANESE AZALEAS.

Hardiness we consider essential, and an estimate of relative hardiness for each variety is given. Some new varieties have been added and are available in the liner grade only.

I cannot pass on without brief mention of our new treatment for iron chlorosis. By spraying with Iron Sequestrene, we have completely eliminated this trouble. Plants are a uniform, deep glossy green, first class salable material. All Kurume varieties will be lifted in late September and heeled into frames for overwintering, so that this foliage condition is preserved for spring deliveries.

OWN ROOT HYBRID RHODODENDRONS.

Because of greatly increased production we are now able to give proof of our avowed intention to bring the prices of Rhododendrons down. The 1 year grade is eliminated, and on certain varieties we have REDUCED OUR PRICES on the two and three year grades. Our stocks have never looked better. Substantial blocks of bushy, deep green plants---thanks again to Iron Sequestrene---make it certain that the stock you receive will sell on sight.

TAXUS.

These, together with Azaleas and Rhododendrons, are our featured plants for this year. Heavy shearing, adequate feeding and general good care has produced some outstanding blocks in all varieties. Our Taxus customers were well pleased last spring. They will be delighted this coming season.

Why not come down to Bridgeton and select your own plants. We shall be happy to see you, but if time is short then ask our sales representative to call. His personal service is available to anyone within 500 miles of the nursery.

G R A F T E D J A P A N E S E M A P L E S

Our 1 and 2 year grafts are especially strong and due to the moist, mild weather, have made good growth. We grade generously and feel sure that you will be well pleased with this stock.

ACER PALMATUM ATROPURPUREUM NOVUM. GRAFTS.

Our unconditional color guarantee is maintained. If any plants do not keep their full color through the summer, the stock can be returned for replacement.

COLOR: Mature leaves...HCC-1030, Maroon.
Young leaves....HCC-827, Ruby Red.

Strong one year grafts, grown in open beds..... \$125.00

Two year, bed grown.

Grade 2.	TT	BR.....	150.00
Grade 1.	TT	BR.....	175.00

ACER PALMATUM BLOODGOOD. GRAFTS.

This selection from Novum has an even darker colored leaf which turns almost black late in the season.

One year, bed grown..... 150.00

ACER P. DISSECTUM PURPUREUM. GRAFTS.

Limited quantity only. The fine foliage of this plant makes it an outstanding item for specimen planting.

One year, bed grown..... 150.00

ACER JAPONICUM AUREUM. GRAFTS.

We have propagated a small quantity of this bright yellow leaf Japanese Maple. It is a most pleasing variation for general landscape work.

One year, bed grown.....EACH 2.50

R O O T E D C U T T I N G S O F

J A P A N E S E M A P L E S

A number of propagators have reported good results from rooted cuttings. This summer for the first time, we have propagated about 7,000 cuttings of Acer Palmatum Atropurpureum Novum and as a matter of interest, illustrate these opposite. They look well at the present time, and if they come through the winter, we shall offer them next year subject to their successful development. Propagation may be entirely by cuttings in the future.

WELL ROOTED CUTTINGS OF ACER P. ATROPURPUREUM. WE BELIEVE THESE PLANTS WILL OVERWINTER IF NEW TOP GROWTH IS MADE AS SHOWN.

J A P A N E S E H Y B R I D A Z A L E A S

Some new additions should be noted in the following list of hybrid Azaleas. These plants have been thoroughly tested and within the limits of hardiness as shown, are excellent.

In general, our stocks are first class and in particular, due to the treatment with Iron Sequestrene, the foliage of all varieties is a deep glossy green. We can guarantee excellent, well budded salable material, carefully protected in frames through the winter. These plants will sell on sight.

ROSEBUD. XXXX. H-1 Plus. GA. Dbl. L. Dwf.

COLOR....HCC-625/2. PHLOX PINK

During the past year we have had reports from England, Holland and New Zealand. All have claimed this variety as outstanding. It is, in our opinion, the one variety which will eventually be produced in larger quantities than Hinodegiri. The flowers develop over an extended period of 2 to 3 weeks and are usually at their best for Mother's Day. The plants are then covered with tightly furled miniature pink "roses".

Spring liners (May 1, 1954 delivery).....	30.00

TAXUS

This is a vintage year for taxus. For the past five years we have been planting substantial blocks and some of the best are coming to salable size now. The blocks have been heavily sheared, moderately fed with chicken manure and root pruned. The result is some really first class specimens, well filled out and of a fine deep color. We have attempted to show this quality in the accompanying illustrations, but to those customers who received taxus from us last spring, we can say this year's crop is even better. With the general shortage of T. Cuspidata Spreading, we would particularly draw your attention to the fine block of T. Cuspidata Nana. This is a somewhat slower growing form, more dense and compact. The stock is of the highest quality.

PART OF THIS YEAR'S CROP OF BERCKMANN'S BIOTA

TERMS AND CONDITIONS OF SALE

The 100 rate applies to any order of 25 plants or more of one kind and size, except where specified. If less than 25 plants are ordered, add 10% to the figures quoted.

ALL PRICES ARE F.O.B. KOSTER NURSERY, BRIDGETON, N. J.

We give no warranty, expressed or implied, as to description, quality, productiveness, or any other matter of any nursery stock we sell and we will not be in any way responsible for the crop. If purchaser does not accept goods on these conditions, they are to be returned at once. We assume no liability for delay or failure in filling orders, due to strikes, accidents, crop failures, or other causes beyond our control.

ALL CLAIMS MUST BE MADE WITHIN FIVE DAYS AFTER RECEIPT OF GOODS.

All quotations are subject to prior sales and confirmation, in accordance with our usual terms and conditions.

BOXING AND PACKING CHARGES ADDITIONAL AT COST.

JAPANESE BEETLE CERTIFICATES SUPPLIED FOR ANY SHIPMENT ON REQUEST.

ALL RHODODENDRONS AND AZALEAS ARE GROWN IN DDT
TREATED GROUND AND CAN BE SHIPPED TO ANY PART
OF THE COUNTRY WITHOUT DIP TREATMENT UNDER THE
JAPANESE BEETLE QUARANTINE.

ALL SHIPMENTS ARE ACCOMPANIED BY A NEW JERSEY CERTIFICATE OF HEALTH.

THE "POWER OF WATER" IN PLANT PROPAGATION

The importance of water in methods of plant propagation becomes more and more apparent. We showed photographs on this page in our 1951-52 catalog of the use of fog lines in our greenhouses, and following the success of these methods, in the summer of 1952 we applied fog lines to a small section of bench in the open. Cuttings of all kinds were inserted and maintained under a constant mist, but without any top protection from sun or rain. The results were so promising that this year we have set up two lines in one of our long sash houses, and have inserted considerable quantities of cuttings of many different kinds. These tests are of some importance because they are of commercial proportions, and we can obtain an accurate idea of the value of this method of propagation under normal commercial conditions. Results so far are excellent.

TOP PICTURE.

This shows a general view of the sash house with fog lines in operation. Jets are set 18 inches apart, and alternate from side to side. The house being 186 feet long, water is fed to the lines from both ends to eliminate drop in pressure. Water comes from our pressure tank, through a fine screen at pressures of from 60 to 70 lbs. psi. Note that there is complete coverage of the plants with water at all times. The fog lines are run from early morning till sun-down, and on hot nights run right through.

RESULTS.

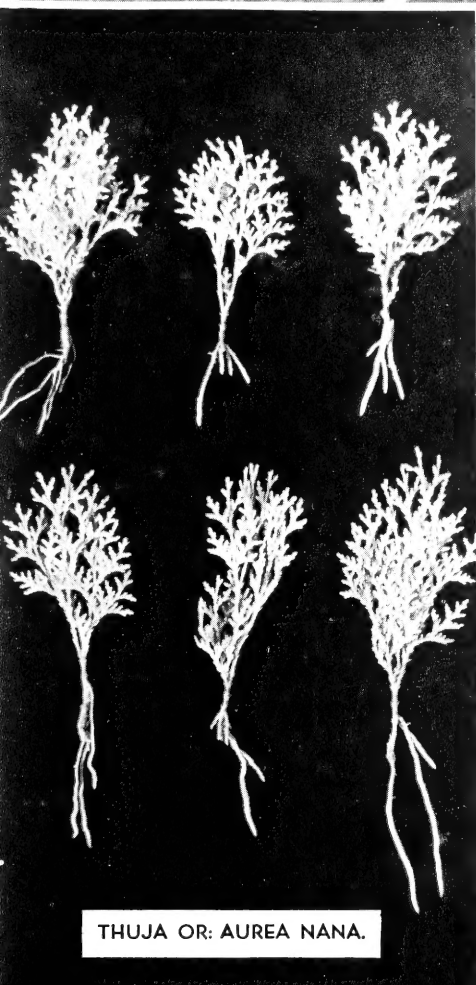

Bottom left. Cuttings of *Thuja* (*Biota*) *aurea nana*. Small tests last year rooted these cuttings 84%. You will note that in the top picture the bench on the left is filled with similar cuttings. These are rooting now----August 20th----and from the 10,000 inserted we expect a high percentage of well rooted cuttings. They were inserted June 5th, in plain coarse sand.

Bottom center. Cuttings of *Kurume azaleas* as lifted from the bench. Medium 50% sand - 50% peat. All azaleas responded exceptionally well to this method of propagation. About 20,000 cuttings are now in this house and all are rooting well.

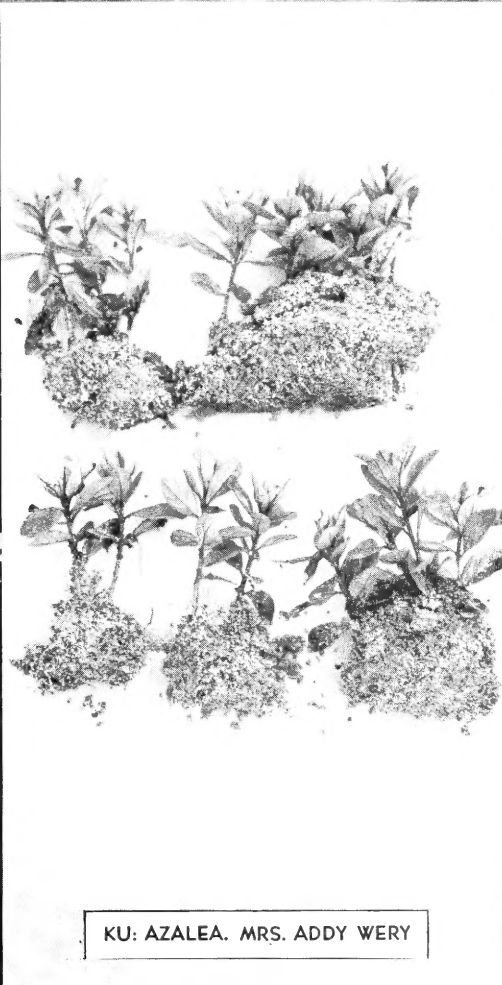

Bottom right. *Magnolias* rooted rapidly and without loss under open air constant mist. The photograph shows cuttings of *M. Stellata*, which rooted 94%. Soft cuttings of almost all types root best, and this year we have rooted *M. Lenne* and *M. Wilsoni* with good percentages. The bench top right is filled with *magnolias*, all of which have now been potted.

Pieris Japonica, *Viburnum Carlsii*, *Forsythia* vars, *Prunus* vars, to mention but a few, have responded equally well. One of the main points of interest is that plants which will not root under normal conditions in the greenhouse, may root well under open air conditions. Berckmann's Golden *Biota* is a typical example.

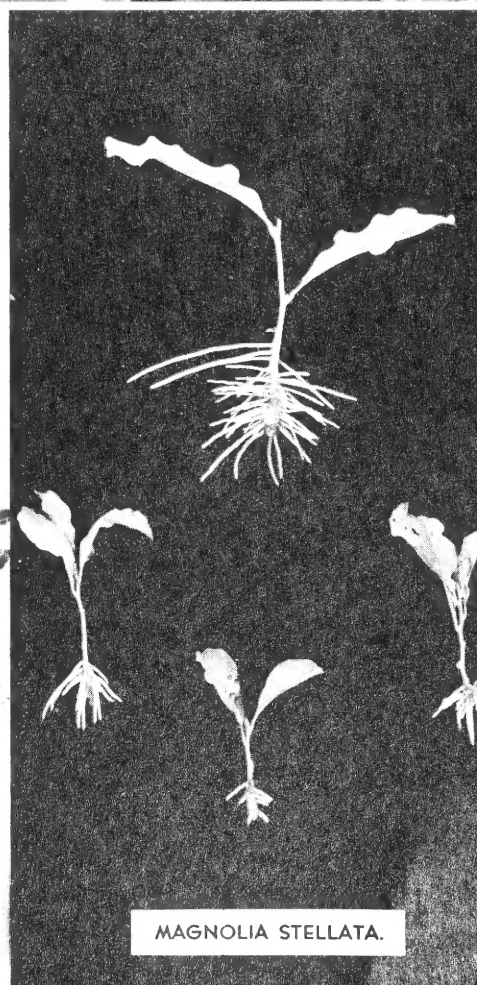

We believe that as growers we are only just beginning to realize the possible "power of water" in all types of plant propagation.
